AGI DATA FEDERATE

agi.com/adf

Manage, store and share your STK scenarios, objects and data

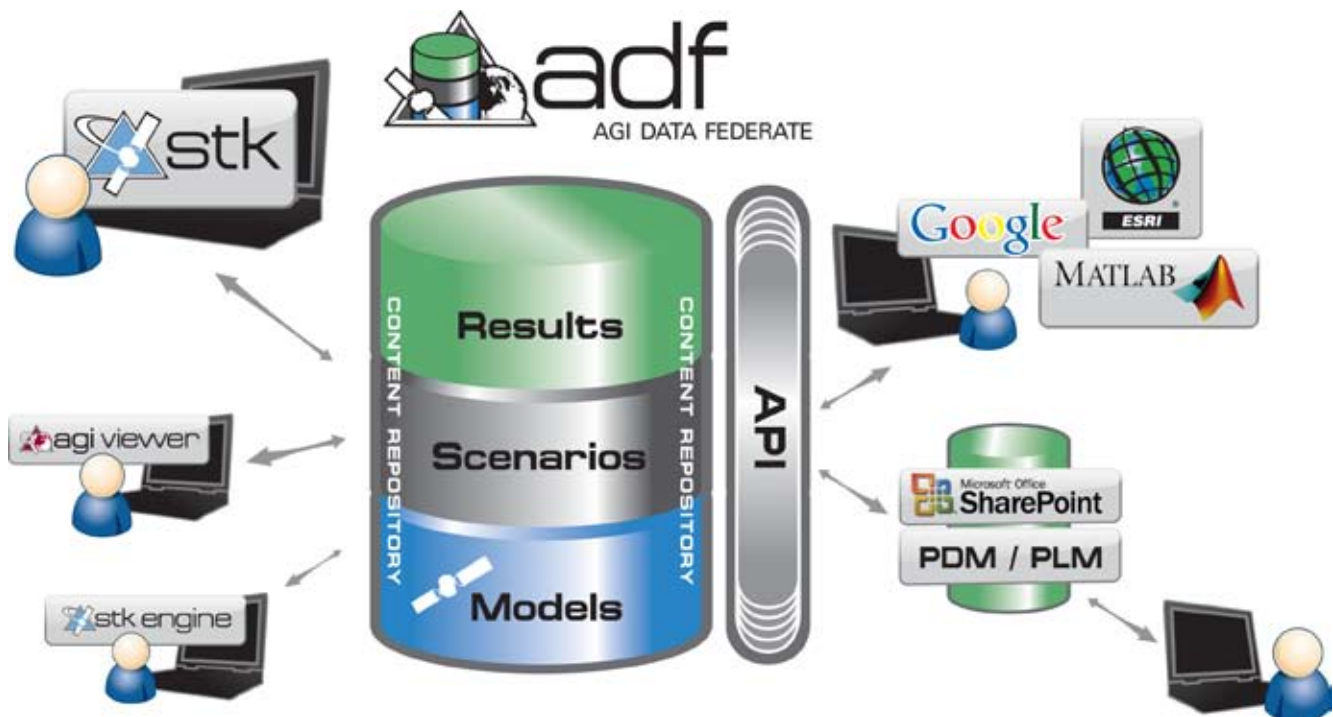

ADF increases productivity and collaboration in your engineering organization by making it easy to reuse and share STK analytic models and results. Stand-alone or integrated with enterprise solutions such as SharePoint or Teamcenter, ADF provides unique STK-specific data management tools including native access from AGI's desktop applications and preservation of parent-child relationships among STK objects.

Features

- Centralized storage to facilitate data security and visibility across project and enterprise
- STK-specific data management for objects, scenarios, results and support for non-STK files
- Version control for data integrity and traceability
- Keyword and meta data support to facilitate search and discovery
- Native access from STK and AGI Viewer
- API for customization and integration with non-AGI applications and services

Benefits

- Prevent lost or duplicate STK work with archive, search and retrieve
- Increase accuracy and consistency by sharing trusted data sets
- Promote collaboration by making it easy for multiple engineers to contribute to a single analysis
- Give non-STK users quick access to STK results
- Extend SharePoint, Teamcenter and other solutions with STK-specific data management
