# Moxie

Empower your team with expert consulting, engineering services, training, and coordination to rapidly integrate Moxie into your MBSE workflows.

Moxie connects your MBSE artifacts with environment analysis tools to create time-synchronized, event-based, executable architectures. Moxie's design enables you to choose the environments and specific environmental criteria that will be analyzed at each step of your state diagrams.
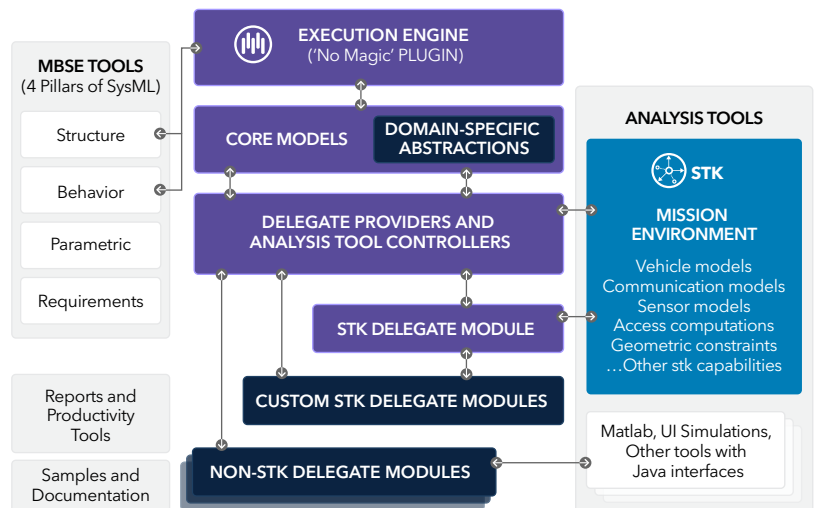

A Moxie Quick Start accelerates the integration of Moxie into your MBSE workflows so your team can rapidly transition its focus from establishing tooling infrastructure to assessing the performance of your digital twin.

- Available in 40-hour increments.

- Consultation with AGI subject matter experts to assess your project's needs and identify efficient integration approaches.

- Assistance architecting and designing your project-specific solution, drawing on practices that have proven successful for other Moxie customers.

- Customized training for delegate developers, systems engineers, leaders, and other team roles.

- Debugging support.

- Subject matter expertise on integrating with Systems Tool Kit (STK)'s object model.

- All support and training completed virtually and recorded for future playback.
